

National Conference on " English Language & Information Communication Technology : Possibilities & Challenges"

INTRODUCTION

Modern age is an age of information, communication and Internet revolution. And in this age, English has become more demanding and more functional to meet the challenges of time. IT has become an indispensable part of modern life. The importance of computers is growing rapidly in all fields of human life like research, education, marketing, trade and entertainment. It becomes more important to know how to use internet and other communication technologies. If a person is not familiar with English, he feels completely isolated on the internet. Thus the lack of knowledge of English causes hindrance in the field of using ICT.

English has witnessed great transformation regarding its objectives, teaching methods and techniques. Teaching English in this Digital Era, requires teachers to play a dual role i.e. imparting knowledge in a second language and also teaching this language in a way that students can learn it themselves and apply it to their daily lives. Technology is one of the most significant drivers of social and linguistic changes. To meet the challenges of modern tech savvy generation, the teachers and learners of English are called upon to exercise their prerogative to act not as dictation arbiters but as democratic moderators - to point out the very real pitfalls for those who would be marching ahead too rapidly. The need of the hour is that learning and teaching English in the modern world should be humanized - so that all may grasp its essence with progress, prosperity and pursuit of happiness. English language and Information Technology are complement to each other. This implies that it has become more important to know English language to use Information Technology services.

OBJECTIVE

The proposed conference aims at exchanging views on latest Information Communication Technology as well as the role of English language in Information Technology Industry. Our motive is to provide a National Platform to all the research scholars, language teachers, academic scientists, engineers, industry researchers and scholar students to exchange and share their experiences and research results about all aspects of innovation, language and technology, and discuss the various issues and practical challenges encountered and the solutions adopted.
